Abstract:

The Romanian banking system has gradually grown full-fledged, which rendered banking activity more sophisticated. The shift to risk-based supervision was a must for monitoring the banking system, particularly for identifying and measuring credit risk, market risk, operational and reputational risk. In fact, during or following inspections, most of the deficiencies found were corrected based on measure programmes closely monitored by the NBR.

Keywords: banking system, supervision, credit risk, market risk, operational risk, reputational risk
